

# HOW TO INSTALL A MAGNETIC SNAP

TUTORIAL

[WWW.SERIALBAGMAKERS.COM](http://WWW.SERIALBAGMAKERS.COM)

Make a mark using an air erasable marker on the wrong side of your fabric as directed in your pattern .

Fuse a scrap of interfacing or stabilizer centered over the mark you made.

Take a washer (round disk with 2 slots) for your magnetic snap and place it over the mark you made. Line the hole up in the middle between the 2 slots with the mark you made. Draw 2 lines through the two slots of the washer.

Using your seam ripper, make small cuts along the two lines you've drawn. Be careful not to cut your slits too long - the prongs of the magnetic snap should fit snugly through the slits.

Push the prongs of one half of your magnetic snap through the slits so the circular part of the

magnetic snap is on the right side of your fabric, and the prongs are on the wrong side.

Place the washer onto the prongs and fold the prongs out to each side to secure this half of your magnetic snap in place.

Place a piece of fusible fleece or duct tape on top of the prongs. This will prevent your prongs from wearing out the other fabric.

Repeat this process to attach the second half of your magnetic snap to your remaining panel.
